

Access from Mozilla Thunderbird

The instructions provided in this section were verified against Mozilla Thunderbird 31.4.0. Please remember to utilize username@dreamscape.com or mail.dreamscape.com where appropriate.

To set up Mozilla Thunderbird:

1. Open Mozilla Thunderbird.
2. Click **Email** under the **Create a new account** heading.
3. Click the **Skip this and use my existing email** button.
4. Specify the following:
 - Your name, as you want it to appear in any messages you send.
 - Your email address and password.

The screenshot shows the 'Mail Account Setup' dialog box. It features a title bar with the text 'Mail Account Setup' and a close button (X) in the top right corner. The main area contains three text input fields: 'Your name:' with the value 'John Doe', 'Email address:' with the value 'email@example.com', and 'Password:' with the value 'Password'. Below the password field is a checked checkbox labeled 'Remember password'. At the bottom of the dialog, there are three buttons: 'Get a new account', 'Continue', and 'Cancel'.

5. Click **Continue**.
6. If Thunderbird fails to find the settings automatically, click **Manual config** and specify the following:
 - Account type. If you want to keep copies of messages on the server, select the **IMAP** option. If you do not want to keep any messages on the server, select the **POP3** option. Selecting IMAP will also allow you to train the SpamAssassin spam filter on email messages you receive, provided SpamAssassin is enabled on the server.

Mail Account Setup

Your name: Your name, as shown to others

Email address:

Password:

Remember password

	Server hostname	Port	SSL	Authentication
Incoming: IMAP	example.com	143	STARTTLS	Encrypted password
Outgoing: SMTP	example.com	25	STARTTLS	Encrypted password

Username: Incoming: Outgoing:

7. Click **Done**.

If you wish to set up a mail account manually, use the following typical combinations of connection security and authentication method settings. If the settings do not work for you, ask your hosting provider about the correct combination.

On Linux, SMTP, IMAP, POP3:

- **SSL/TLS:** STARTTLS
- **Authentication:** Encrypted password

On Windows, IMAP:

- **SSL/TLS:** None
- **Authentication:** Encrypted password

On Windows, SMTP, POP3:

- **SSL/TLS:** None
- **Authentication:** Normal password

Other parameters that you may need when configuring your account manually:

- POP3 port: 110
- IMAP port: 143
- SMTP port: 25
- **Username.** Your full email address. For example: johndoe@dreamscape.com.
- **Incoming server address (POP3/IMAP).** Specify your website's Internet address. Example: dreamscape.com
- **Outgoing server address.** Specify your website's Internet address. Example: dreamscape.com
